

STEP TWO

Turn to the final page in the manual. Place this clear sheet on top of STEP ONE.

Using the four-digit code you can now see, open the aluminium hatch on the right-hand side of the fax apparatus.

Sculpt the aluminium sheets and place them around the fax machine according to the diagram.

Aluminium really is an incredible element. It has the ability to absorb harmful radiation and reduce the amount of energy overspill from the interdimensional portal.

I have specially designed this structure to allow for maximum radiation absorption without overwhelming the wormhole opening. Though simple, this structure will protect you. Your safety is always my foremost concern.
