

STEP ONE

Firstly, congratulations for getting this far. I am already so proud of what we have achieved!

But, let's not dawdle.

Step one is simple and in two parts.

PART ONE: lever puller

The person who is currently closest to the lever on the fax machine will be the person to pull it. You cannot pull it yet.

PART TWO: space alignment

You must align your space to mirror mine.

As you understand, both portals must work in parallel. The physical alignment of our spaces must be parallel, too. The more precise, the better.

Once open, the interdimensional portal will swell in size, taking in the space immediately circling the fax machine. You must clear the space around the fax machine according to the below diagram.

DIAGRAM
