

I trust you.

I know you haven't completed the full five tasks yet, but, well, I trust you. Your questionnaire responses told me everything I need to know.

I hereby grant you level five clearance.

This may be easier if we talk. I want to hear your voice. I have a lot to tell you.

I'll need your help to configure a sonic inter-dimension access device - or "antenna" - that carries voice through space and time. It really isn't as complicated as it sounds. Trust me. It is time to build the antenna.

- 1 Find a thin, metal item around 20cm long. This should have 3-5 blunt prongs at the end of it, or 1 round bulbous end. ☐
- 2 Find this item now. Once returned with the item, skip to step 5. ☐
- 3 If you have continued reading, you have not followed these instructions. Find this item now. Once you have returned with the item, please go to step 5. ☐
- 4 If you cannot find a suitable item, the item you find will be suitable. The choice you make will be the right choice. ☐
- 5 Place your item into the mouth of the fax, with the pronged/bulbous end facing towards you. ☐
- 6 Regard the fax machine. On the top right-hand side you will find an antenna base. Carefully pop this up, lifting vertically. Once the antenna reaches an appropriate height, release. ☐
- 7 Retrieve the metal item and place it in the antenna base. ☐
- 8 Your sonic inter-dimension access device is now complete. You should now be able to talk with me directly. ☐
- 9 Add the numbers on the antenna base together. Write the sum of these numbers here: ☐
- 10 Use this number to call me on the fax phone. ☐

Call me,

TBL
